ArcGIS is not installed. Many MGET users prefer to run MGET tools from the ArcGIS user interface. You will not be able to do this. You can still run the tools by writing your own computer programs that invoke them, although many of them require ArcGIS to perform their processing. Those tools will not work. Due to these problems, we highly recommend you use MGET in conjunction with ArcGIS.

To fix this problem, install ArcGIS and then reinstall MGET:

1. Install ArcGIS 9.1 or later.
2. Install the latest Service Pack for your version of ArcGIS.
3. Start the Windows Control Panel.
4. Switch to Classic View and click Programs and Features.
5. Remove the program named Python 2.5 GeoEco-0.7.
6. Rerun this MGET setup program.
